

To the Leobury Urban Council  
Report for 1907

Leobury

May 6/08

Gentlemen

I beg to report that  
81 Births were registered in your  
District during the year 1907,  
of which 47 were Boys and 34 Girls;  
and of which 5 were illegitimate,  
making a Birthrate of 24.5 per  
1000 of the population.

There were also registered 67 Deaths  
of which 16 were in persons between  
the ages of 70 and 80 and 12 between  
80 and 90 years.

Fifteen of the deaths occurred  
in non-residents, so that the  
Deathrate of those belonging to the  
District was 15.7 as against  
an average of 16.8 for the two  
previous years.

The deaths of infants under 1 year  
numbered 8, and of these 3 were  
due to premature birth.

The chief cause, of death were  
besides senile decay, Cancer, 7,  
Phtisis, 6 and Heart disease, 3.  
Seven cases of infectious disease  
were notified to me, namely  
five cases of Diphtheria and  
two cases of Enteric fever.

The septic tanks in the Salisbury Union  
have continued to work satisfactorily  
and I strongly recommend, as in  
fact I did in my last annual  
report, that the remainder of the  
sewage tanks be similarly con-  
verted and covered over.

The town-water supply has been  
satisfactory, the new well yielding  
an ample supply.

The slaughterhouses, dairies, bakeries,  
lodginghouses, schools, and workshops  
have been periodically inspected  
and generally found in a sanitary state.

I am yr obediently  
Wm. A. Wood M.D.
